

Shopify CLI Cheat Sheet

The theme commands and CI auth you actually run. Built by Kaspian Fuad, Shopify developer.

theme dev essentials

```
shopify theme dev --store my-store
Start local dev server (interactive login on first run)

--theme 123456789012
Attach to a specific remote theme (env SHOPIFY_FLAG_THEME_ID)

--live-reload hot-reload
hot-reload (default) | full-page | off

--host 0.0.0.0 --port 9293
Rebind server for Docker/WSL (defaults 127.0.0.1)

--theme-editor-sync
Pull admin Theme Editor changes back to local

-a / --allow-live
Allow dev against live theme (blocked by default)
```

Non-interactive / CI auth (the big one)

```
SHOPIFY_CLI_THEME_TOKEN=shptka_xxx
Theme Access token. Env var for --password (NOT SHOPIFY_FLAG_PASSWORD)

SHOPIFY_FLAG_STORE=my-store.myshopify.com
Target store. Env var for --store

SHOPIFY_FLAG_FORCE=1
Suppress interactive prompts if a CI step hangs

shopify theme push --json --theme <id> --store
$SHOPIFY_FLAG_STORE --password
$SHOPIFY_CLI_THEME_TOKEN
Shopify's documented CI deploy step (push, not dev)
```

shopify.theme.toml + password flags

```
[environments.staging]
theme = / store = / password = keys, one block per env

shopify theme dev -e staging
Apply a named environment

--password
CLI auth token (Theme Access / Admin API)

--store-password
Storefront password-page password (SHOPIFY_FLAG_STORE_PASSWORD)

Precedence
CLI flag > env var > shopify.theme.toml
```

theme check

```
shopify theme check --path ./my-theme
Only way to scope; no positional path arguments

-a / --auto-correct
Auto-fix correctable offenses in place

--fail-level warning
Exit 1 on warnings (default is error only)

-o json > results.json
Flat array of per-file offenses for CI

--list / --init
List active checks / generate .theme-check.yml

--category (REMOVED)
Gone in Theme Check 2.x; use -C theme-check:all
```

theme console (Liquid REPL)

```
shopify theme console
Interactive Liquid REPL against real store data

--url /products/<handle>
Load page context so product/collection resolve

-s my-store.myshopify.com
Target store (prefix or full domain)

--password $SHOPIFY_CLI_THEME_TOKEN
Auth without interactive login

No --theme / --port
Those belong to theme dev, not console
```

theme lifecycle

```
theme push --unpublished --json
Create + push a new unpublished theme, JSON out

theme push --theme <id> --strict
Block push unless theme check passes (0 errors)

theme push --live --allow-live
Push to live; --allow-live is a required guardrail

theme pull --live --nodelete
Pull live theme, keep extra local files

theme publish --theme <id> --force
Promote an already-pushed theme to live

theme share
New unpublished theme + password-protected preview link
```

Auth + global

```
shopify auth login / logout
Log in / out (logout deletes active dev theme)

shopify organization list
Replaces the old shopify whoami

shopify version
Installed CLI version

shopify config autoupgrade off
Disable CLI self-upgrade (auto-skipped in CI)

SHOPIFY_CLI_NO_ANALYTICS=1
Opt out of anonymous telemetry
```
