

Your tracking apps have 7 days to migrate

ScriptTag REST blocks new installs October 1

Swipe →

Apps at risk

- ✗ Third-party pixel managers
- ✗ Heat-map script injectors
- ✗ Analytics apps on REST
- ✓ Apps with embed block live
- ✓ Shopify-native channel pixels

Swipe →

4 steps, 15 minutes

1

Open Settings

Settings > Apps and integrations

2

Spot injectors

Tracking, pixel, and analytics apps

3

Ask the vendor

"Migrated to theme embed block?"

4

Activate it

Online Store > Customize > App embeds

Help

Log in

The REST Admin API is a legacy API as of October 1, 2024. Starting April 1, 2025, all new public apps must be built exclusively with the [GraphQL Admin API](#).

Closes Oct 1

ScriptTag

Install AI Toolkit

Ask about this page

Copy MD

Requires script_tags access scope.

Theme app extensions

If your app integrates with a Shopify theme and you plan to submit it to the Shopify App Store, you must use theme app extensions instead of Script tags. Script tags can only be used with vintage themes. [Learn more](#).

The ScriptTag resource represents remote JavaScript code that is loaded into the pages of a shop's storefront or the order status page of checkout. This lets you add functionality to those pages without using theme templates.

Script tags are scoped to the app that created them. When an app is uninstalled from a shop, all of the script tags that it created are automatically removed along with it.

Endpoints

POST

/admin/api/latest/script_tags.json

Creates a new script tag

scriptTagCreate

GET

/admin/api/latest/script_tags.json

Retrieves a list of all script tags

scriptTags

GET

/admin/api/latest/script_tags/{script_tag_id}.json

Retrieves a single script tag

scriptTag

GET

/admin/api/latest/script_tags/count.json

Retrieves a count of all script tags

deprecated

PUT

/admin/api/latest/script_tags/{script_tag_id}.json

Updates a script tag

scriptTagUpdate

DEL

/admin/api/latest/script_tags/{script_tag_id}.json

Deletes a script tag

scriptTagDelete

The POST endpoint that creates script tags. Blocked on all API versions from October 1.

Migration confirmed when

✓ **Embed block toggle in Customize**

✓ **Vendor changelog confirms it**

✓ **Block activated per theme**

✗ **Waiting for vendor email**

✗ **Assuming it auto-updates**

Swipe →

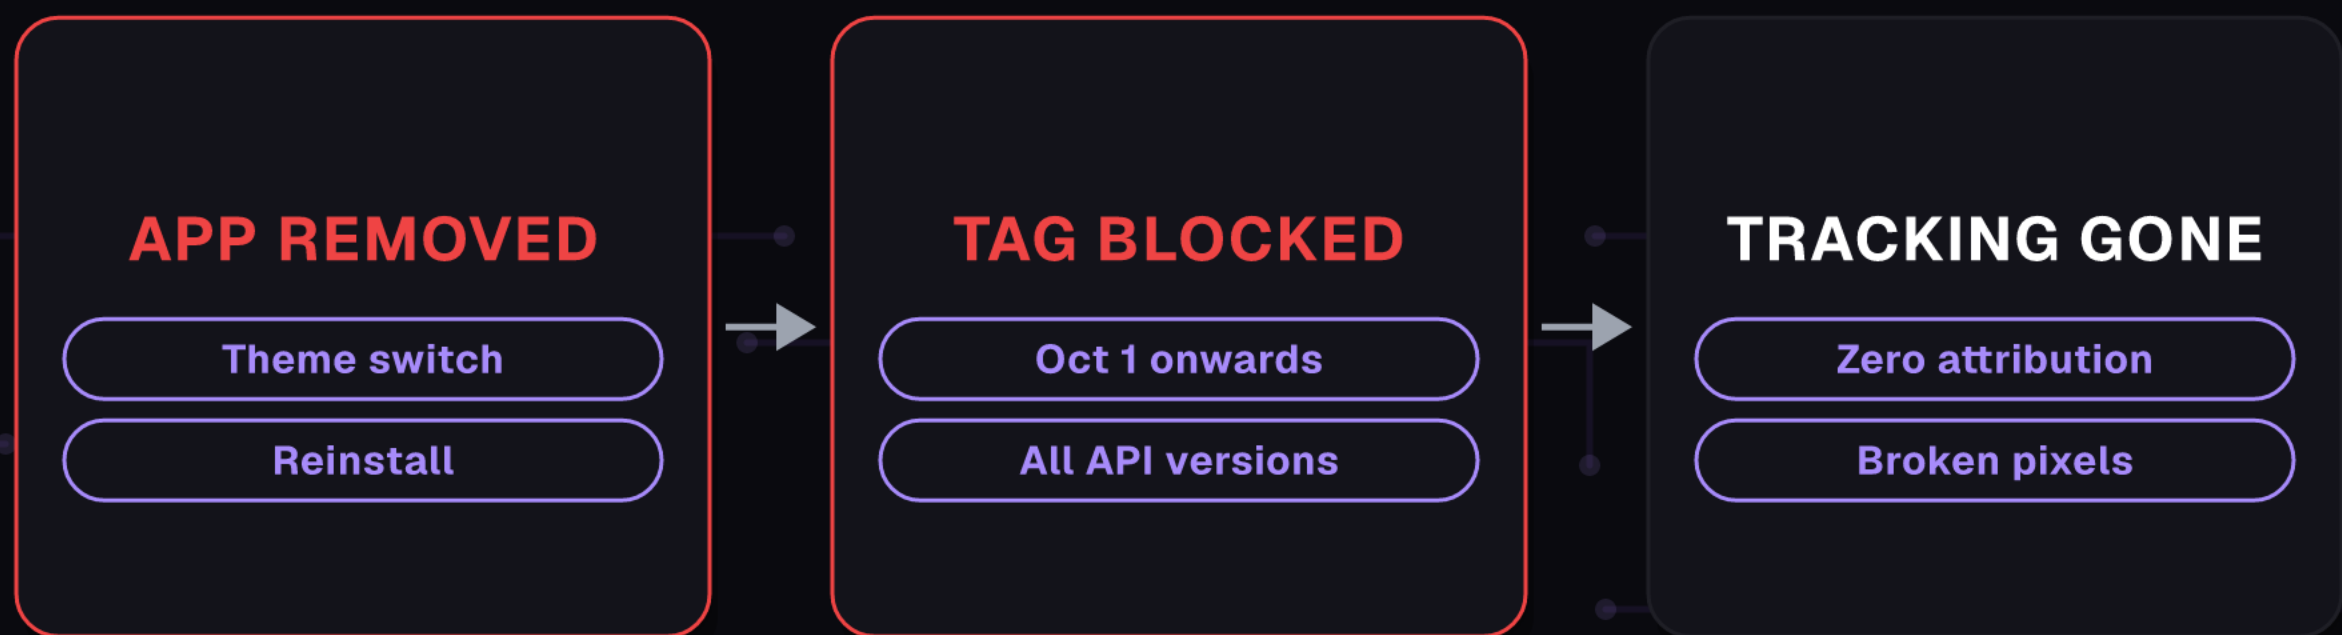

Act before Sep 30

A tracking app that can't reinstall after October 1 means **broken attribution** on any theme switch.

Pinning your API version won't save it. The deprecation hits all API versions.
