Stocky dies Aug 31. The part you'll actually miss isn't the POs

Everyone's asking which app replaces Stocky. After spending real time on the actual migration, I think that's the wrong first question.

The apps are mostly fine. The hard part is getting your history out in one piece.

The clean stuff exports without drama as CSV: PO history, stock counts, supplier list, current costs. That's not where you get hurt.

What worried me is what doesn't come out cleanly. Your vendor notes, for one. All those per-supplier reminders you build up over years: MOQ 50, call before ordering hoodies because they run two weeks behind in Q4, our discount tier is 12% over \$2k, blacklist the Tallinn warehouse after they shipped the wrong dye lot twice. That context lives in a notes field, and from what I can tell it doesn't survive the export.

Same with cost history. Not what a product costs today, but how the cost actually moved over time. And the par levels you've spent months calibrating. None of it seems to land in the tidy CSV.

37 merchants on what actually breaks in the migration

Swipe →

3 STEPS BEFORE AUG 31

1

Export vendor notes

Copy per-supplier context now

2

Run all Stocky reports

Download PO history and stocktakes

3

Audit API connections

Settings > Apps, find Stocky links

Swipe →

NATIVE SHOPIFY COVERS
